

## Design Summary Headings

Draft 1.1 Angus Soutar May 2017

*The summary should be brief notes or key points, preferably all on one page only*

- General comment on the Design Cycle (Observe - Assess - Design, was it difficult? Did it “flow”)
- Main design methods used (sector analysis, options and decisions etc - see our design guide)
- List some of the tools and techniques (mainly “thinking tools”) that you found useful (e.g. site survey by water level, map of elements and functions, “random assembly” exercise with elements, specific client questionnaire used etc)
- Your reflections on how you managed the client
- Something important that you learned from the whole process

*In addition, provide a “site data” summary: (This helps to share designs across regions and climate zones).*

### **Global position:**

Latitude and longitude or GPS co-ordinates

Useful national map references (e.g. Ordnance Survey in the UK)

### **Climate factors:**

Elevation above sea level

Distance from the sea

Rainfall data

Climate zone classification

### **Local factors:**

Aspect

Slope

Urban/Rural

Soil type
